

superbuilt ai

By Antigravitee Technologies Pvt Ltd.

AI Co-worker For
.Architecture Engineering & Construction

Overview

Superbuilt AI gives your architecture and construction teams a purpose-built AI workforce – so your projects move faster, cost less to run, and land with fewer surprises.

A Unified, Agentic AI Platform

Built for the AEC

Hey, how can I assist your project today?

Align project. Update everything.

AI shouldn't just answer. It should act.

*Reclaim your 52%. Move from manual coordination
to autonomous execution*

You already know what's costing you

Great projects don't fail because of bad design. They fail in the gap between design and delivery – in the coordination that slips, the compliance that surprises, the version that shouldn't have gone to site. You've seen it. You've paid for it.

None of this is a talent problem. Your teams are skilled. It is a time problem And it is structural.

Site Conflict

It was in the drawings three months ago. Nobody caught it in time. By the time it surfaced on-site, the fix cost 10x what it would have at the drawing stage.

Approval Delayed

Wrong code. Wrong jurisdiction. Two months of committed capital sitting still – not from a design failure, but from a compliance check that was done manually at the last minute.

Revision Chaos

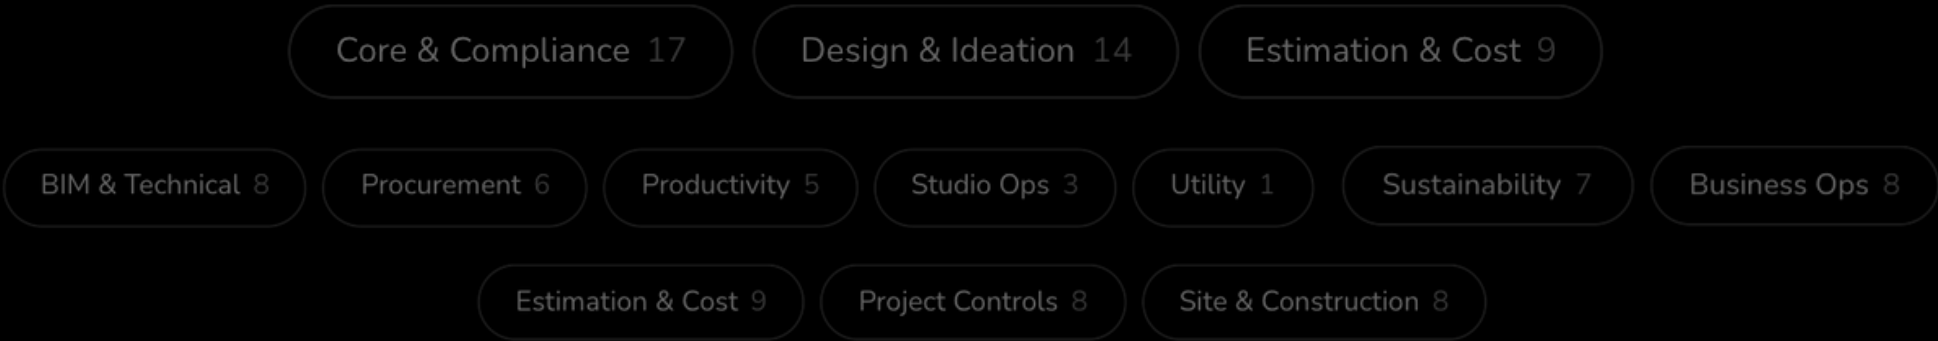

Consultant had v3. Contractor built from v1. No one flagged the gap. Now there's a room full of people, a project on hold, and a budget conversation nobody planned for.

These aren't edge cases. They're the default. 80% of large construction projects overrun budget. \$273 billion is lost to rework every year in the US alone. Not to bad materials. Not to bad people. To a coordination and compliance layer that was never built for the speed modern projects demand.

What Superbuilt AI Does For Your Organization

Superbuilt AI is a network of specialized AI agents – each one built for a specific job in the AEC workflow. Think of it as adding a highly capable, always-available team member to every project: one who manages coordination, monitors compliance, generates BOQs, reviews drawings, handles vendor communication, and keeps everyone working from the same version of the truth.

Your architects and engineers do not change how they work. Superbuilt connects to your existing tools – email, AutoCAD, Google Drive, WhatsApp, Slack – and works inside them. The first week it is running, your team feels the difference.

. More **design Time**

Your team spends too much time coordinating work instead of creating it. Superbuilt automates routine tasks, giving architects hours back every week.

. No Compliance **Surprises**

Instant code and regulation checks catch issues early, before submission. Fewer rejections. Faster approvals.

. One **Source of Truth**

Keep teams aligned with a single, up-to-date project version. Prevent errors caused by outdated information.

. Grow **Without Hiring**

Automate repetitive work so your team can handle more projects without adding headcount.

The return is measurable. From day one.

Every rupee Superbuilt saves comes from work your team is already doing – just doing it manually. We automate the cost, not the value.

Rework

8–12% of project cost lost to rework
Issues caught at the drawing stage
Save up to ₹5Cr on a ₹100Cr project

Compliance

2–4 months lost after rejection.
Compliance checked before submission
Faster approvals and lower holding costs

Coordination

Multiple tools, disconnected teams.
One platform. One source of truth.
Fewer version conflicts and site issues

Staffing

Hire more people to grow. AI handles repetitive work
₹50L+ annual savings per architect

Project Capacity

Team capacity limits growth. AI automates repetitive work.
Take on 2–3× more projects with the same team.

Delivery

Budget overruns and delays.
Faster project execution
Capital deployed sooner

5–12%

Project cost saved
Rework eliminated at drawing stage

₹30–50L

Saved per project/mo
Holding cost on faster approvals

20%

Faster delivery
Earlier revenue, better capital cycle

3x+

ROI in 6 months
Typical enterprise outcome

How It Works in Practice

Superbuilt AI is live inside your workflow in under a week. There is no large implementation project, no new interface to learn, and no disruption to how your teams already operate.

. Plug-in

Connect your email, Google Drive, WhatsApp, Slack, and AutoCAD files. Superbuilt reads your project history, learns your firm's workflow patterns, and gets to work. No migration. No new tools to buy.

. Activate

Your compliance agent monitors every drawing against applicable codes. Your coordination agent tracks tasks, chases responses, and keeps the team aligned. Your BOQ agent generates quantity schedules from drawings automatically. Voice and chat available.

. Stay focused

Your architects and project managers receive summaries, flags, and decisions – not raw information to process. They review and approve. The system handles execution. Design work fills the calendar instead of admin.

. Compound

Superbuilt learns your firm's vendor preferences, approval patterns, and design standards over time. The second project runs faster than the first. The tenth runs faster still. The platform builds institutional knowledge that stays with the firm, not the individual.

“We used to spend the first hour of every Monday just triaging emails and figuring out what had changed over the weekend. Superbuilt handles all of that now. We just walk in and design.”

– Architect, mid-size firm using Superbuilt AI

Pricing

TEAM & ENTERPRISE PRICING

One plan. One shared AI pool.
No hidden complexity.

Superbuilt gives architecture, engineering and construction teams access to specialized AI agents for drawings, compliance, BOQ, specifications, design support and project work with a simple team price and a shared pool of AI credits

USD pricing - August 2026

Taxes are added separately where applicable.

Plans

Choose the level that fits your team

Every paid plan includes Superbuilt agents and a shared AI credit pool. Credits are shared by the whole company, so one heavy user does not need a separate plan.

SMALL TEAMS

\$60

TEAMS

per user / month - minimum 4 users

- \$60 AI credits per user, added to one shared company pool
- All core Superbuilt AI agents
- Team workspace
- Basic admin and usage controls
- Standard support

GROWING FIRMS

\$80

BUSINESS

per user / month - minimum 10 users

- \$80 AI credits per user, added to one shared company pool
- Everything in Team
- Stronger admin controls
- SSO available
- Priority support
- Standard integrations by scope

LARGE ORGANIZATIONS

\$2000

ENTERPRISE

per month - custom agreement

- From \$2,000 shared AI credits
- Custom user count and credit pool
- SSO and stronger security controls
- Custom integrations / API
- Dedicated support and agreed service levels
- Indian Residency Premium available

Simple Example: \$60 per user is the full Team plan price. There is no separate access fee. If 4 people join, the company pays \$240/month and the full \$240 is added to one shared AI credit pool for the team.

	Team	Business	Enterprise
Minimum users	4	10	Custom
Shared AI credits	\$60 per user	\$80 per user	From \$2,000 total
All core agents	Included	Included	Included
Team workspace	Included	Included	Included
Admin controls	Basic	Advanced	Custom
SSO	Optional add-on / upgrade	Available	Included by scope
Priority support	-	Included	Included
Custom integrations	By quote	By scope	Included by scope
Indian Residency Premium	Available	Available	Available

How credits work

Your team uses one shared balance

We do not promise a fixed number of BOQs, drawing reviews or compliance checks because a 2-page file and a 40-sheet package can cost very different amounts to process.

- Each user adds credits to the same company pool.
- Every AI task uses credits based on the actual work needed.
- Before a very large job, Superbuilt can show an estimated credit range.
- Admins can set approval limits for expensive jobs.
- When credits run low, the company can top up without changing its plan.
- Unused credits can roll forward while the contract is active, subject to the order form.

Top-up	What happens
\$100	Adds \$100 to the shared AI pool
\$250	Adds \$250 to the shared AI pool
\$500	Adds \$500 to the shared AI pool
Custom	Any larger project or company-wide credit purchase

No surprise bill

Standard Team and Business accounts are prepaid. If the pool is empty, new AI jobs stop until the account is topped up. Enterprise customers can agree different billing terms.

The pilot is meant for real project files, not a limited demo.
One-time - up to 5 users - 30 days

Prove it on your real project work.

No limited demo. Put live files and meaningful workflows through Superbuilt, then decide from evidence.

Plan your pilot →

\$250

one-time / up to 5 users / 30 days

- ✓ \$250 shared AI credits
- ✓ All core Superbuilt agents
- ✓ Guided setup and usage visibility
- ✓ End-of-pilot value review
- ✓ Unused credits can move into your first contract

If you continue: Unused pilot credits can move into the first paid contract period. The longer the commitment and the earlier the payment, the better the price.

Contract discounts

Customer commitment	Discount	Payment
30-day pilot	0%	One-time prepaid pilot
6-month contract	0%	Standard contract price
12 months - paid quarterly	5%	Four quarterly payments
12 months - fully upfront	8%	Full year paid at signing
24 months - paid annually upfront	12%	Each contract year paid at the start of that year
24 months - fully paid upfront	15%	Full two years paid at signing

The normal monthly AI credit pool stays unchanged even when the contract price is discounted. All discounts are confirmed in the signed order form.

For Stricter Security Needs

Indian Residency Premium

An optional version for organizations that care more about where data is processed, who can access it and what security controls are available.

+ 25%

Added to the recurring plan price

What it adds	Plain-English meaning
India-region processing	Supported AI workloads can be configured to use India-region processing under the agreed setup.
Stronger login controls	SSO and tighter organization access controls can be included.
Data handling controls	Retention and deletion rules can be agreed for the supported setup.
Security review support	We can provide architecture details and relevant cloud-provider security documentation during procurement.
Relevant infrastructure certifications	Where applicable to the selected cloud services, documentation may include SOC 2 Type II and ISO/IEC 27001/27017/27018 coverage.

Important

The exact Indian Residency setup is written into the contract. We will only promise the parts of the data flow that are actually configured for that customer.

WHAT CAN BE CUSTOMIZED

We keep the product simple, but enterprise deals can be adjusted

Item	Can we customize it?	Simple answer
Number of users	Yes	Above the plan minimum.
Size of shared credit pool	Yes	Buy a larger monthly pool or project-specific credits
Invoice schedule	Yes	Quarterly, annual upfront, or agreed enterprise terms
SSO / login setup	Yes	Available depending on plan and scope.
Integrations / API	Yes	Standard or custom scope.
Support level	Yes	Priority or dedicated support for larger accounts
Indian Residency Premium	Yes	Available where the required setup is technically supported
Unlimited AI	No	AI usage stays metered so both sides know what is being used.
Taxes included	No	Taxes are added on top of the prices shown

Recommended starting point

Start with the \$250 paid pilot. Put real project work through Superbuilt for 30 days, then choose a 6-, 12- or 24-month rollout based on what your team actually used and saved.

Pricing note. All prices are in USD and exclude GST and other applicable taxes. For India invoices paid in INR, the USD contract value can be converted using the exchange-rate rule written in the order form. Final user count, credit pool, security setup and support terms are confirmed in the signed agreement

Let's find your number.

We'll build a specific ROI projection for your portfolio – before you commit to anything.
